#106 Example for receiving a file through API Gateway and...

24 comments

Keksike opened on March 6, 2017

Required: NoType: JsonUpdate requires: No interruptionBodyS3Location The Amazon Simple Storage Service (Amazon S3) location that points to an OpenAPI file, which defines a set of RESTful APIs in JSON or YAML format. ExamplesBased on OpenAPI specificationThe following example creates an API Gateway RestApi resource based on an OpenAPI specification. { "MyRestApi": { "Type": "AWS::ApiGateway::RestApi", "Properties": { "Body": { "OpenAPI specification": null }, "Description": "A test API", "Name": "MyRestApi" } } } MyRestApi: Type: 'AWS::ApiGateway::RestApi' Properties: Body: OpenAPI specification: null Description: A test API Name: MyRestApi With endpoint typeThe following example creates an API Gateway RestApi resource with an endpoint type. { "Parameters": { "apiName": { "Type": "String" }, "type": { "Type": "String" } }, "Resources": { "MyRestApi": { "Type": "AWS::ApiGateway::RestApi", "Properties": { "EndpointConfiguration": { "Types": [{ "Ref": "type" }] }, "Name": { "Ref": "apiName" } } } } } Parameters: apiName: Type: String type: Type: String Resources: MyRestApi: Type: AWS::ApiGateway::RestApi Properties: EndpointConfiguration: Types: - !Ref type Name: !Ref apiNameWith REGIONAL endpoint typeThe following example imports an API Gateway RestApi resource with an endpoint type of REGIONAL. { "Resources": { "RestApi": { "Type": "AWS::ApiGateway::RestApi", "Properties": { "Body": { "swagger": 2.0, "info": { "version": "0.0.1", "title": "test", "basePath": "/pete", "schemes": ["https"] }, "definitions": { "Empty": { "type": "object" } }, "Name": "myApi", "Parameters": { "endpointConfigurationTypes": "REGIONAL" } } } } Resources: RestApi: Type: AWS::ApiGateway::RestApi Properties: Body: swagger: 2.0 info: version: 0.0.1 title: test basePath: /pete schemes: - https definitions: Empty: type: object Name: myApi Parameters: endpointConfigurationTypes: REGIONALWith ApiKeySourceTypeThe following example creates an API Gateway RestApi resource with ApiKeySourceType, BinaryMediaTypes and MinimumCompressionSize. { "Parameters": { "apiKeySourceType": { "Type": "String" }, "apiName": { "Type": "String" }, "binaryMediaType1": { "Type": "String" }, "binaryMediaType2": { "Type": "String" }, "minimumCompressionSize": { "Type": "String" } }, "Resources": { "MyRestApi": { "Type": "AWS::ApiGateway::RestApi", "Properties": { "ApiKeySourceType": { "Ref": "apiKeySourceType" }, "BinaryMediaTypes": [{ "Ref": "binaryMediaType1" }, { "Ref": "binaryMediaType2" }], "MinimumCompressionSize": { "Ref": "minimumCompressionSize" }, "Name": { "Ref": "apiName" } } } } Parameters: apiKeySourceType: Type: String apiName: Type: String binaryMediaType1: Type: String binaryMediaType2: Type: String minimumCompressionSize: Type: String Resources: MyRestApi: Type: AWS::ApiGateway::RestApi Properties: ApiKeySourceType: !Ref apiKeySourceType BinaryMediaTypes: - !Ref binaryMediaType1 - !Ref binaryMediaType2 MinimumCompressionSize: !Ref minimumCompressionSize Name: !Ref apiNameSee also restapi:create in the Amazon API Gateway REST API Reference Required: NoType: StringUpdate requires: No interruptionName A name for the RestApi resource.], "Body": Json, "BodyS3Location": S3Location, "CloneFrom": String, "Description": String, "DisableExecuteApiEndpoint": Boolean, "EndpointConfiguration": EndpointConfiguration, "FailOnWarnings": Boolean, "MinimumCompressionSize": Integer, "Mode": String, "Parameters": { Key: Value, ... }, "Policy": Json, "Tags": [Tag, ... Duplicates are not allowed. Required: NoType: StringUpdate requires: No interruptionBinaryMediaTypes The list of binary media types that are supported by the RestApi resource. Use -1 instead of / in the media types, for example image/png or application/octet-stream.] } PropertiesApiKeySourceType The source of the API key for metering requests according to a usage plan. Valid values are overwrite or merge. Required: NoType: IntegerUpdate requires: No interruptionMode This property applies only when you use OpenAPI to define your REST API. Required: NoType: Map of StringUpdate requires: No interruptionPolicy A policy document that contains the permissions for the RestApi resource. Use merge to define top-level RestApi properties in addition to using OpenAPI. Required: NoType: StringUpdate requires: No interruptionDisableExecuteApiEndpoint Specifies whether clients can invoke your API by using the default execute-api endpoint. When compression is enabled, compression or decompression is not applied on the payload if the payload size is smaller than this value. By default, RestApi supports only UTF-8-encoded text payloads. The following are the available attributes and sample return values. Valid values are: HEADER to read the API key from the X-API-Key header of a request.AUTHORIZER to read the API key from the UsageldentifierKey from a Lambda authorizer. Required: NoType: S3LocationUpdate requires: No interruptionCloneFrom The ID of the RestApi resource that you want to clone. Required: NoType: List of StringUpdate requires: No interruptionBody An OpenAPI specification that defines a set of RESTful APIs in JSON format. If you don't specify this property, a default value is chosen. For merge, the new API definition takes precedence, but any container types such as endpoint configurations and binary media types are merged with the existing API. Use this property when creating an API. Required: ConditionalType: StringUpdate requires: No interruptionParameters Custom header parameters for the request. Required: NoType: BooleanUpdate requires: No interruptionMinimumCompressionSize A nullable integer that is used to enable compression (with non-negative between 0 and 10485760 (10M) bytes, inclusive) or disable compression (with a null value) on an API. For overwrite, the new API definition replaces the existing one. Required: NoType: BooleanUpdate requires: No interruptionEndpointConfiguration A list of the endpoint types of the API. For more information, see Enable Support for Binary Payloads in API Gateway in the API Gateway Developer Guide. For REST APIs created before March 29, 2021, the default is overwrite. When importing an existing API, specify the endpoint configuration types using the Parameters property. To require that clients use a custom domain name to invoke your API, disable the default endpoint. By default, clients can invoke your API with the default https://(api id).execute-api.(region).amazonaws.com endpoint. The Mode determines how API Gateway handles resource updates. The existing API identifier remains unchanged. For more information, see restapi:create in the Amazon API Gateway REST API Reference. On January 1, 2016, the Swagger Specification was donated to the OpenAPI initiative, becoming the foundation of the OpenAPI Specification.SyntaxTo declare this entity in your AWS CloudFormation template, use the following syntax: { "Type": "AWS::ApiGateway::RestApi", "Properties": { "ApiKeySourceType": String, "BinaryMediaTypes": [String, ... Required: NoType: JsonUpdate requires: No interruptionTagsAn array of arbitrary tags (key-value pairs) to associate with the API.Required: NoType: List of TagUpdate requires: No interruptionReturn valuesRefWhen you pass the logical ID of this resource to the intrinsic Ref function, Ref returns the RestApi ID, such as a1bcdef2gh.For more information about using the Ref function, see Ref.Fn::GetAttThe Fn::GetAtt intrinsic function returns a value for a specified attribute of this type. Required: NoType: EndpointConfigurationUpdate requires: No interruptionFailOnWarnings Indicates whether to roll back the resource if a warning occurs while API Gateway is creating the RestApi resource. Please enable Javascript to use this application The AWS::ApiGateway::RestApi resource creates a REST API. Otherwise, the default value is merge. Required: NoType: StringUpdate requires: No interruptionDescription A description of the RestApi resource. For YAML templates, you can also provide the specification in YAML format. For more information about using the Fn::GetAtt intrinsic function, see Fn::GetAtt.RootResourceId The root resource ID for a RestApi resource, such as a0bc1234de. Generally, it's preferred to use API Gateway's OpenAPI extensions to model these properties. Setting it to zero allows compression for any payload size. To set the ARN for the policy, use the !Join intrinsic function with "" as delimiter and values of "execute-api:" and "".

3/02/2022 · GitHub is where people build software. More than 73 million people use GitHub to discover, fork, and contribute to over 200 million projects. The OpenAPI Specification (aka Swagger) provides a structured way for describing REST APIs. The AWS API Gateway can be configured based on this Swagger configuration files. This way the configuration of the API can be done in 'code', can be automated completely and from the configuration the documentation can be generated. Use -1 instead of / in the media types, for example image/png or application/octet-stream. By default, RestApi supports only UTF-8-encoded text payloads. Duplicates are not allowed. For more information, see Enable Support for Binary Payloads in API Gateway in the API Gateway Developer Guide. Required: No. Type: List of String API Gateway doesn't support the combination of OpenAPI and CloudFormation resources. Required: Conditional. Type: Json. Update requires: No interruption. BodyS3Location. The S3 location of an OpenAPI definition. Supported only for HTTP APIs. To import an HTTP API, you must specify a Body or BodyS3Location. Additional Notes: Elastic Beanstalk, CloudFormation, or OpsWorks are particularly useful for blue-green deployment method as they provide a simple way to clone your running application stack. CloudFormation and OpsWorks are best suited for the prebaking AMIs.; CodeDeploy and OpsWorks are best suited for performing in-place application upgrades.For disposable ... 13/01/2021 · Let's get back to track and start creating a bucket policy using CloudFormation. Steps to create an S3 Bucket Policy using CloudFormation? Let's see the step by step instruction to create a bucket policy. Step1: Provide proper permission. If you are not an admin user, you should have s3:PutBucketPolicy permission for your userrole. Get a personalized view of AWS service health Open the Personal Health Dashboard Current Status Feb 6, 2022 PST. Amazon Web Services publishes our most up-to-the-minute information on service availability in the table below. 13/11/2017 · Write down the domain name for the URL in each region (for example, 2wkt1cxxx.execute-api-us-west-2.amazonaws.com), as you need that later when you deploy the Route 53 setup. Create the custom domain name. Next, create an Amazon API Gateway custom domain name endpoint.
